

Axis Mundi (AM)

A Systemic Cosmic Coordination Model

by Aureon M. Scientia

April 2025

“Reality is not objective, but emerges through interaction – between the observer and the field. Attention itself is creation.”

The Axis Mundi model provides a structured, systemic interpretation of the functioning of collective systems—whether planetary or civilizational. It is built along eight core components, aiming to connect large-scale coordination across natural, cultural, and cognitive domains:

- [1] Cosmic Energy Flow** – Patterns of information and energy circulating through or arriving from the universe.
- [2] Planetary Sensitivity** – Earth’s systemic responses to global stimuli (e.g., climate, magnetic fields).
- [3] Ecological Response Patterns** – Global adaptation and feedback of living systems.
- [4] Collective Knowledge Imprints** – Informational and cultural imprints generated by communities.
- [5] Value Formation and Mediation Systems** – The coordinating role of ethical, moral, scientific, and social norms.
- [6] Decision-Making Mechanisms** – The development of collective decisions (e.g., societies, leadership structures, AI algorithms).
- [7] Global Feedback Loops** – Earth’s self-regulatory, ecosystemic, and human feedback mechanisms.
- [8] Meta-Level Meaning Creation** – The systemic self-interpretation and meaning-making regarding existence.

Axis Mundi serves as a “world axis” for various scientific disciplines, linking natural, social, and mental systems within a unified framework.
